SPORTO BRANDS | 2021 | M E D I A N A

INTRO

For the 15th consecutive year in Slovenia (for the ninth time in Croatia and Serbia), SPORTO cooperated with Mediana (Institute for market and media research) in identifying the most valuable brands (clubs and athletes) in the eyes of the general public. Winners represent the most recognized, popular, successful, and marketing-wise appealing male and female athletes and sports clubs in Slovenia, Croatia and Serbia (based on public research).

METHODOLOGY

Brand value research model includes the following elements: awareness, familiarity (knowledge and following), top/leading edge (global reach), satisfaction (with achieved results), success (current results and potential), likeability (personality, appeal, trust), engagement (inclusion in informal conversations) and fan participation (measured only for clubs).

Each brand value model earns a maximum of 100 points (within each of 7/8 dimensions). When the winning “points” are connected to the winner of the model, as a result, we get the winning score of an individual athlete or club within the brand value model. Sporto Brands result is based on complex model of the 7 (athletes)/ 8 (clubs) dimensions. The percentages are the results of some dimensions in the model. A SPORTO Brand could be anyone who is the best at a minimum of one of the 7 (athletes)/ 8 (clubs) dimensions and exceeds total of 85 points.

- CAWI method
- Representative sample
- Population 15-75, N=1200 N=400 per country (Slovenia, Croatia, Serbia)
- MOST VALUABLE SPORTO BRAND (MVSb) INNOVATIVE model is based on current survey and well-established data scientists’ approach

Please find profiles of the SPORTO Brand title winners for 2021 (from Slovenia, Croatia and Serbia) with overall research score/points and chosen elements/ dimensions of the research (familiarity, likeability and engagement). The highest ranked athletes and clubs in each category (marked gold) receive the SPORTO Brand 2021 statuette.

*Social media following (from Instagram & Facebook) is not the element/dimension of the research. The followership is also not (the only) measure of social media success.
